PROFESSIONAL SUMMARY

- Junior Data Analyst / Data Scientist with hands-on experience building ML models to support operational decision-making in real-world public-sector systems and Power BI dashboards, SQL pipelines.
- Seeking remote data roles. Proficient in SQL, Advanced Excel, Python and Power BI for Business intelligence and data driven insights.
- Eager to contribute to data-driven roles in analytics and data science while advancing in Machine Learning and AI.

TECHNICAL PROFICIENCIES

Languages & Libraries: Python (Pandas, Numpy, Seaborn, Plotly, Matplotlib), SQL, Java.

Machine Learning/AI Libraries & Tools: Scikit-learn, TensorFlow, PyTorch, Git/Github, Jupyter Notebooks.

Databases & Platform: MySQL, Google Sheets.

BI & Reporting Tools: Power BI, Excel (Ad Functions, Pivot Tables, VBA) Google Data Studio)

Soft Skills and Additional Competencies: Collaboration and Adaptability.

EXPERIENCE

Data Scientist Intern – Masvingo City Council Zimbabwe

August 2024 –July 2025

- Cleaned, validated, and standardized municipal datasets, improving data quality for departments such as water, waste management, and property services.
- Assisted in migrating legacy spreadsheets into structured databases to support accurate reporting and long-term data management.
- Developed analytical insights on service delivery performance, including trends in water outages, refuse collection delays, and road maintenance requests.
- Created GIS-based visualizations and spatial analyses to map infrastructure issues, service delivery hotspots, and land-use patterns.
- Built interactive dashboards (Power BI/Python) to track KPIs for revenue collection, service requests, and operational efficiency.
- Supported smart-city and digital-transformation initiatives through data governance, infrastructure mapping, and exploratory analytics.

PROJECT

Throughput Optimization for Beitbridge Border Post using Queueing Simulation and Constrained Optimization. – Associated with Midlands State University

- Designed a real-time predictive border management system to estimate clearance times and optimize lane allocation at the Beitbridge Border Post.
- Applied queueing theory (M/M/1, M/M/c) and simulation modelling to analyze traffic flow, identify bottlenecks, and evaluate clearance efficiency.
- Engineered a data pipeline using Python and SQL to process arrival rates, service times, officer schedules, and documentation variables.
- Applied Random Forest and XGBoost to predict waiting and clearance times and proposed a real-time dashboard for queue and operational performance monitoring

Education

Midlands State University | Bachelor of Honours in Data Science and Informatics | August 2022 – Current |

Certifications

[Certified Generative AI](#)
